*Navedena porazdelitev ur velja, če je vpisanih vsaj 15 študentov. Drugače se obseg izvedbe kontaktnih ur sorazmerno zmanjša in prenese v samostojno delo. / This distribution of hours is valid if at least 15 students are enrolled. Otherwise the contact hours are linearly reduced and transferred to individual work.

Nosilec predmeta / Lecturer:	Prof. dr. Lovrenc Lipej
------------------------------	-------------------------

Jeziki / Languages:	Predavanja / Lectures: slovenski/angleški - Slovene/English
---------------------	---

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Zaključena druga stopnja bolonjskega študija program s področja naravoslovja, tehnologije ali tehnike.

Prerequisites:

Completed Bologna second level degree in natural sciences, technology or engineering.

Vsebina:

Ihtiologija z ribiško biologijo
<ul style="list-style-type: none"> ▪ Definicija. Zgodovina raziskovanja. ▪ Metode in tehnike v ihtiologiji. Podvodno vzorčenje rib. Tehnike nedestruktivnih metod popisovanja. Vzorčenje endolitskih in kriptobentoških vrst. Vzorčenje rib hrustančnic. ▪ Osnove zunanje morfologije in anatomije rib. Biometrija in meristika. Metode določevanja. ▪ Življenske strategije. Razmnoževalna ekologija. Spolni dimorfizem. Spolni polimorfizem. K vs r strategija. Protiplenilske strategije. ▪ Prehranjevalna ekologija. Generalisti vs

Content (Syllabus outline):

Ichthyology and fisheries biology

- Definition. History of ichthyological research.
- Methods & techniques in ichthyology. SCUBA methods in ichthyology. Non-destructive visual techniques. Sampling of endolithic & cryptobenthic species. Sampling of cartilaginous fishes.
- Basic external fish morphology and anatomy. Biometry and meristics. Indentification methods.
- Life strategies. Reproductive ecology. Sexual dimorphism and polymorphism. K vs r strategy.
- Feeding ecology. Generalist vs specialists.

<p>specialisti. Metode raziskovanja prehrane. Trofični nivoji.</p> <ul style="list-style-type: none"> ▪ Zakaj toliko vrst rib na svetu? Zoogeografski pregled. Endemizem. Ekološke skupine rib. Kriptobentoške vrste. Endolitske vrste. ▪ Cehi. Ribe kot ekološki indikatorji. ▪ Osnove ribiške biologije. Ribji resursi. Trajnostni ribolov. Gojenje rib. 	<p>Techniques in diet research. Trophic levels.</p> <ul style="list-style-type: none"> ▪ Why are there so many fish species? Fish zoogeography. Endemism. ▪ Ecological groups of fishes. Cryptobenthic species. Endolithic species. ▪ Fish guilds. Fish as ecological indicators. ▪ An introduction to fisheries biology. Fish living resources. Sustainable fisheries. Aquaculture.

Temeljni literatura in viri / Readings:

Izbrana poglavja iz naslednjih knjig: / Selected chapters from the following books:

Halfman, G.S. 2007. Fish Conservation: A Guide to Understanding and Restoring Global Aquatic Biodiversity and Fishery Resources. Island Press. Washington, USA.

Lipej, L., Orlando-Bonaca, M., Makovec, T. 2009. Jadranske babice. MBP-NIB Monografije.

Tyus, H.M. 2011. Ecology and Conservation of Fishes. CRC Press, Boca Raton, USA

strokovni prispevki o tovrstni tematiki iz Jadranskega morja / scientific papers related to this topic in the Adriatic and Mediterranean areas

Cilji in kompetence:

Predmet ponuja možnosti bazičnega znanja o ihtiologiji kot pomembni biološki disciplini s posebnim poudarkom na ribiško biologijo kot neposredno aplikacijo ihtiologije. Slušatelji dobijo uvid v temeljna spoznanja o biologiji in ekologiji rib in metode raziskovanja. Poseben poudarek je novejšim metodam vzorčenja kot so npr. tehnike nedestruktivnega vzorčenja, ki je uporaben na nivoju zavarovanih območij.

Objectives and competences:

This course offers the basic knowledge on ichthyology as a special biological scientific discipline with special remark on fisheries biology as a direct application of ichthyology. Students will achieve basic information on the biology and ecology of fishes and scientific methods, as well. Special attention is paid to the recently discovered techniques for sampling such as non-destructive techniques, which are suitable for studying marine protected areas.

Predvideni študijski rezultati:

- slušatelj bo poznal osnovne biologije in ekologije rib,
- zнал bo uporabiti osnovna vzorčevalna orodja,
- seznanil se bo z uporabo mednarodno standardiziranih tehnik vzorčenja s posebnim poudarkom na biometriji in meristiki,
- zнал bo determinirati vrste,
- zнал bo izolirati otolite in spoznal metode njihove uporabe,
- zнал bo uporabljati mednarodne baze podatkov (fishbase, WormS).

Intended learning outcomes:

- Aquainting knowledge on the general fish biology and ecology,
- Aquainting skills on field sampling and laboratory work
- Aquainting skills on internationally standardized techniques with special regards on biometry and meristics,
- Aquainting skills on fish identification
- Aquainting skills on otolith isolation and use in fish biology
- Aquainting knowledge how to use international data bases (fishbase, WormS)

Metode poučevanja in učenja:	Learning and teaching methods:	
Terensko delo, predavanja, seminar, konzultacije	Field work, lectures, seminar, consultation	
Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Seminarska naloga Ustni zagovor seminarske naloge	50 % 50 %	Seminar work Oral defense of seminar work
