#### Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Znanje, ki je ekvivalentno izobrazbi druge stopnje ali univerzitetni izobrazbi s področja naravoslovja ali tehnologije.

#### Prerequisites:

Knowledge, which is equivalent to a second level or university degree from natural sciences or technology.

#### Vsebina:

- Neravnovesno stanje plina in plinske razelektritve (enosmerna, nizkofrekvenčna, radiofrekvenčna, mikrovalovna razelektritev, kombinirane razelektritve).
- Plazma (nastanek plazme, osnovne značilnosti in parametri plazme, ionske in reaktivne plazme, metode za plazemsko diagnostiko, plazemske reaktorje).
- Plazemske tehnologije (interakcija plazemskega radikalov s površinami trdnin, pregled vakuumskih plazemskeh tehnologij, plazemska aktivacija in pasivizacija površin, plazemska čiščenje, hladno upepeljevanje, plazemska

#### Content (Syllabus outline):

- Non-equilibrium state of gas and gaseous discharge (DC discharge, low-frequency discharge, radiofrequency discharge, microwave discharge, combined discharges).
- Plasma (plasma formation, basic characteristics and parameters of plasma, ionic and reactive plasmas, methods of plasma diagnostics, plasma reactors).
- Plasma technologies (interaction of plasma radicals with surface of solids, overview of vacuum plasma technologies, plasma surface activation and passivation, plasma cleaning, cold incineration, plasma functionalization and

#### Temeljni literatura in viri / Readings:

##### Knjige/Books

- Marija Gorjanc, Miran Mozetič, Modification of fibrous polymers by gaseous plasma: principles, techniques and applications. Saarbrücken: LAP Lambert Academic Publishing, 2014, ISBN 978-3-659-61460-6.
- Rajdeep Singh Rawat, Plasma Science and Technology for Emerging Economies, Springer, Berlin, 2017, ISBN 978-981-10-4217-1.
- Chang-Ming Du, Jian-Hua Yan, Plasma Remediation Technology for Environmental Protection, Springer, Berlin, 2017, ISBN 978-981-10-3656-9.

##### Revije/Journals:

- Plasma Sources Science and Technology
- Plasma Processing and Polymers
- Plasma Chemistry and Plasma Processing
- Plasma
- Surface and Coatings Technology
- Applied Surface Science

#### Cilji in kompetence:

Študentje pridobijo osnovna znanja s področja plazemskih tehnologij ter dobijo pregled nad razpoložljivo opremo:

- naučijo se kritično oceniti pomanjkljivosti klasičnih tehnoloških postopkov za obdelavo materialov, predvsem z vidika kakovosti in ekološke (ne)ustreznosti tehnologij,
- pridobijo znanja, ki so potrebna za samostojno pripravo elaborata, v katerem ocenijo možnosti zamenjave obstoječih klasičnih tehnologij z novimi plazemskimi tehnologijami,
- naučijo se kritično oceniti prednosti in pomanjkljivosti plazemskih tehnologij, predvsem časovno, kadrovsko in finančno zahtevnost vpeljave novih tehnologij, ekološke prednosti novih tehnologij in kakovosti novih tehnologij.

#### Objectives and competences:

The students master the basic skills in the domain of plasma technologies and gain an overview of available equipment:

- critically assess deficiencies of conventional technological procedures for processing materials, in particular from the viewpoint of quality and ecological (un)acceptability of technologies,
- obtain knowledge required to independently prepare a study in which the possibilities of replacement of the existing conventional technologies by new plasma ones are assessed,
- learn to critically evaluate the advantages and deficiencies of plasma technologies, in particular the complexity of introduction of new technologies in terms of time, staff and funding, their ecological advantages and their quality.

|--|--|

#### Predvideni študijski rezultati:

Študenti bodo z uspešno opravljenimi obveznostmi tega predmeta pridobili sposobnosti:

- presoditi možnosti uporabe plazemske tehnologije za procesiranje materialov,
- izbrati primeren plazemski reaktor za obdelavo izbranega materiala,
- izmeriti osnovne plazemske parametre,
- priporočati industriji plazemske tehnologije,
- razlikovati med plinsko plazmo in neravnovesnimi stanji plinov,
- zgraditi eksperimentalni plazemski reaktor za obdelavo vzorcev,
- sklepati o ekonomski upravičenosti plazemskih tehnologij.

#### Intended learning outcomes:

Students successfully completing this course will acquire abilities to:

- estimate possibilities of plasma technologies for materials processing,
- select the appropriate plasma reactor for specific material;
- measure basic plasma parameters,
- recommend plasma technology to industry,
- distinguish between plasma and non-equilibrium state of gas,
- construct an experimental reactor for treatment of samples,
- evaluate the economic aspects of plasma technology.

#### Metode poučevanja in učenja:

- Kratka predavanja
- Seminar
- Laboratorijsko delo

#### Learning and teaching methods:

- Short courses
- Seminar
- Laboratory work

Delež (v %) /
