

UČNI NAČRT PREDMETA / COURSE SYLLABUS			
Predmet:	Proteazni degradom v napredovanju raka		
Course title:	Protease Degradome in Cancer Progression		

Študijski program in stopnja Study programme and level	Študijska smer Study field	Letnik Academic year	Semester Semester
Nanoznanosti in nanoteknologije, 3. stopnja	Bioznanosti	1	1
Nanoznanosti in nanoteknologije, 3. stopnja	Biosciences	1	1

Vrsta predmeta / Course type	Izbirni / Elective
------------------------------	--------------------

Univerzitetna koda predmeta / University course code:	NANO3-895
---	-----------

Predavanja Lectures	Seminar	Sem. vaje Tutorial	Lab. vaje Laboratory work	Druge oblike Other	Samost. delo Individ. work	ECTS
15	15			15	105	5

*Navedena porazdelitev ur velja, če je vpisanih vsaj 15 študentov, sicer se obseg izvedbe kontaktnih ur sorazmerno zmanjša in prenese v samostojno delo. / This distribution of hours is valid if at least 15 students are enrolled. Otherwise the contact hours are linearly reduced and transferred to individual work.

Nosilec predmeta / Lecturer:	Prof. dr. Tamara Lah Turnšek
------------------------------	------------------------------

Jeziki / Languages:	Predavanja / Lectures: slovenščina, angleščina / Slovenian, English
	Vaje / Tutorial:

Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti: Zaključena druga stopnja bolonjskega študija ali diploma univerzitetnega študijskega programa. Potrebna so osnovna znanja biokemije, biologije in še posebej celične oz. molekularne biologije.	Prerequisites: Completed Bologna second cycle study program or an equivalent pre-Bologna university study program. Basic knowledge of biochemistry, biology and specifically cell biology and molecular biology is needed.
---	--

Vsebina: Vsebinsko je predmet razčlenjen na več tematik s področja biologije tumorjev. Poudarjena je vloga matičnih celic v raku in v določenih aspektih tudi vloga proteaznega degradoma. Epidemiologija raka in biomarkerji – pomen proteolitnega sistema kot pokazatelji poteka bolezni Potek karcinogeneze: ključne molekularne spremembe v tumorskih celicah (onkogeni, tumorski supresorski geni in ostale vrste genskih sprememb, signaliziranje in epigenetika)	Content (Syllabus outline): The course is divided in several themes in the field of tumour biology. The role of stem cells in cancer is emphasized and in certain aspects also the role of protease degradome. Epidemiology of cancer and biomarkers – the impact of proteolytic system as biomarkers of the disease progression Carcinogenesis process: The key molecular changes in tumour cells (oncogenes, tumour suppressor genes and other genetic alterations, signalling and epigenetic signalling)

Nature Reviews Cancer – review articles on selected topics in the field of proteases & cancer

Cilji in kompetence:

Cilj predmeta je seznaniti študenta s področja bioznanosti o pomenu znanstvenih izsledkov, tako neposredno v razumevanju poteka bolezni in posredno v klinični uporabnosti preko prenosa znanj v farmacevtsko tehnologijo in njenou uporabo v onkologiji.

Kompetence študenta z uspešno zaključenim predmetom vključujejo razumevanje osnovnih pojmov eksperimentalne in translacijske onkologije ter poznavanje sodobnih metod zdravljenja, ki temeljijo na principih individualizirane medicine, uporabnih tudi v onkologiji.

Objectives and competences:

The goal of the course is to familiarize the student with the meaning of scientific achievements, either directly in understanding of the disease progression and indirectly in clinical application via knowledge transfer into pharmaceutical industry and its application in oncology.

The competencies of the students when successfully completing this course would include understanding of basic concepts in experimental and translational oncology as well as the understanding of temporary methods of therapy, based on the principles of individualized medicine, as applied in oncology.

Predvideni študijski rezultati:

Študentje, ki bodo uspešno zaključili ta predmet, bodo pridobili:

Intended learning outcomes:

The students successfully completing this course will acquire:

<ul style="list-style-type: none"> • Osnove nastanka rakavih obolenj – vrste karcinogeneze • Osnovne klasifikacije rakavih obolenj in epidemiološke pristope v klinični onkologiji • Molekularne mehanizme napredovanja raka • Celična biologija raka s poudarkom na matičnih celicah • Razumevanje kompleksnosti raka, kakor tudi pomen in vpliv raziskovalnega dela v translacijski onkologiji 	<ul style="list-style-type: none"> • Basics on cancer initiation – types of carcinogenesis • Basics on classification of cancer pathology and epidemiologic approaches in clinical oncology • Molecular mechanism of cancer progression • Cell biology of cancer with emphasis on stem cells • The understanding of the complexity of cancer, and the importance of research in translational oncology
---	---

Metode poučevanja in učenja:

- Pridobljena teoretična in praktična znanja študent pridobi v izbranih predavanjih in konzultacijah
- Možno je tudi vključevanje v eksperimentalno raziskovanje v laboratorijih

Learning and teaching methods:

- The acquired theoretical ad practical knowledge are acquired with selective lectures and consultations.
- It is also possible to include the students into experimental research in the laboratory

Delež (v %) /

Weight (in %)

Assessment:

Načini ocenjevanja:	Delež (v %) / Weight (in %)	Assessment:
Ustni zagovor seminarske naloge	70 %	Oral defence of seminar work
Sodelovanje pri pripravah člankov ali seminarske naloge	30 %	Participation in preparation of scientific articles of seminar work
